Transforming Dementia Care:

Integrating Innovation, Evidence, and Digital
Solutions for Holistic Support in Europe

Artificial Intelligence Based Health,
Optimism, Purpose, and Endurance
in Palliative Care for Dementia

A Value-Driven Design Framework

AI4HOPE works towards aligning with the values, needs, and preferences of people with dementia, caregivers, and healthcare professionals, making the digitally-enabled solutions we are co-creating not only innovative but respectful.

Iterative Design Process

Supported by Alzheimer Europe Patient Advisory Group, the development includes four co-creation sprints across six countries (DE, IE, SI, ES, PT, UK), focused on iterative feedback to refine digital health interventions.
